COSC2671 Assignment 2 - Tamil Nadu Election 2026 Public Opinion and Network Analysis

Assignment Name	COSC2671 Assignment 2 - Tamil Nadu Election 2026 Public Opinion and Network Analysis
Group Number	Postgraduate Group 13
Group Members	3
Repository/access link	https://github.com/S4118579/SMNA-Assignment2-Group13.git

Group Members:

- Navya Vani Yedla - S4118579
- Rohan Kurimilla - S4137849
- Punith Peram Varaprasad - S4204200

1. Team Project Plan

The aim of this project was to analyse YouTube public opinion related to the Tamil Nadu Election 2026 and compare online political discussion with election result data. The project used social media data, Natural Language Processing, sentiment analysis, topic modelling and network analysis to investigate whether YouTube-based public opinion reflected actual election performance.

The main research question was: To what extent does YouTube-based public opinion reflect the Tamil Nadu Election 2026 results?

The project plan included collecting YouTube comments, preparing the election result dataset, cleaning and preprocessing text data, conducting sentiment and topic analysis, creating political network graphs, comparing online discussion with election performance, and preparing the final report and presentation.

The team planned the work across four stages. First, the group selected the topic and finalised the research question. Second, the team prepared the datasets and analysis workflow. Third, the team completed sentiment analysis, topic modelling and network analysis. Finally, the team prepared the report, inserted graphs, checked the page limit and organised the submission files.

2. Weekly Timesheets for Each Team Member

1. Navya Vani Yedla - S4118579

Week / Date Range	Tasks Completed	Hours
Week 1: 08/05/2026 - 12/05/2026	Participated in topic discussion, research question planning, YouTube data collection planning and search query preparation	7.0 hrs
Week 2: 13/05/2026 - 18/05/2026	Supported YouTube comment collection, dataset checking, text preprocessing review, sentiment discussion and party mention review	9.0 hrs
Week 3: 19/05/2026 - 22/05/2026	Helped with topic modelling discussion, network analysis review, graph checking and report analysis review	11.0 hrs
Week 4: 23/05/2026 - 24/05/2026	Participated in final review, worksheet checking, repository checking and submission preparation	8.0 hrs
Total		35.0 hrs

2. Rohan Kurimilla - S4137849

Week / Date Range	Tasks Completed	Hours
Week 1: 08/05/2026 - 12/05/2026	Participated in project planning, data source planning, YouTube search query planning and notebook setup	7.0 hrs
Week 2: 13/05/2026 - 18/05/2026	Worked on dataset preparation, YouTube comment collection, preprocessing, sentiment analysis, party mention analysis and initial graphs	10.0 hrs
Week 3: 19/05/2026 - 22/05/2026	Worked on topic modelling, temporal analysis, network construction, Gephi/network visualisation and graph selection	11.5 hrs
Week 4: 23/05/2026 - 24/05/2026	Helped with report consistency checking, graph review, code-output checking and final submission preparation	7.0 hrs
Total		35.5 hrs

3. Punith Peram Varaprasad - S4204200

Week / Date Range	Tasks Completed	Hours
Week 1: 08/05/2026 - 12/05/2026	Participated in assignment planning, topic selection, research question discussion and data source planning	7.0 hrs
Week 2: 13/05/2026 - 18/05/2026	Helped check election result dataset, reviewed party mention and sentiment outputs, and selected early graphs for report	8.5 hrs
Week 3: 19/05/2026 - 22/05/2026	Worked on report structure, introduction, background, data collection, analysis writing, graph selection and interpretation	11.5 hrs
Week 4: 23/05/2026 - 24/05/2026	Worked on report formatting, graph insertion, page-limit checking, worksheet preparation and final submission checking	7.5 hrs
Total		34.5 hrs

3. Team Communication Summary

The team communicated mainly through Google Meet, WhatsApp, and a few in-person meetings at university. Google Meet was used for detailed discussions, screen sharing, reviewing notebook outputs, checking graphs and finalising the report. WhatsApp was used for quick updates, reminders and file sharing.

All team members also met a couple of times at university to discuss the report structure, review progress, and decide which graphs should be included in the final submission. These in-person meetings helped the team clarify tasks more quickly and improved coordination during the final stages of the assignment.

The team worked well together throughout the assignment. All members contributed to the project, and there were no major communication or technical issues. Small issues related to graph formatting, notebook outputs and report alignment were discussed and resolved during team meetings.

4. Individual Self-Reflection

Navya Vani Yedla – S4118579

I contributed throughout different stages of the project including project planning, YouTube data collection, preprocessing discussions, sentiment analysis review, and interpretation of analytical outputs. I also participated in checking notebook results, reviewing generated visualisations, and discussing how the findings should be connected with the research objectives. During both online and in-person meetings, I worked collaboratively with the team to review the report structure, network graphs, and overall analysis workflow. This assignment helped me understand how NLP and social network analysis techniques can be applied to large-scale social media discussions to study online political behaviour and public opinion patterns.

Rohan Kurimilla – S4137849

I contributed across multiple phases of the project including data preparation, preprocessing, sentiment analysis implementation, topic modelling, network analysis discussions, graph generation, and result interpretation. I also worked with the team to review notebook outputs, refine visualisations, and ensure that the analytical findings were clearly explained within the report. Throughout the project, I participated in collaborative discussions related to election comparison analysis, public sentiment trends, and political interaction networks. This assignment improved my understanding of how computational techniques can be combined with social media analytics to produce meaningful insights from large-scale YouTube political discussions.

Punith Peram Varaprasad – S4204200

I contributed to the project through data review, preprocessing discussions, topic interpretation, report writing, graph analysis, formatting, and final validation of the notebook outputs and report findings. I also participated in collaborative discussions involving sentiment analysis results, network visualisations, and interpretation of political discussion patterns. During the project, I worked closely with the team to ensure consistency between the generated outputs and the written analysis presented in the report. This assignment helped me understand the importance of combining technical analysis, interpretation, and visual communication when presenting complex social media and political network findings professionally.
